Summary

Pre-final year Software Engineering student at VIT with expertise in cloud architectures, distributed systems, and machine learning. Proficient in Python, Java, and cloud technologies (AWS, containerization). Strong foundation in data structures, algorithms, and software development. Proven ability to design secure, scalable systems with hands-on experience in full-stack application development. Seeking opportunity to apply technical expertise in cloud security solutions and ML platform engineering.

Skills

Programming Languages: Python, Java, C, C++

Cloud & Infra: AWS, Kubernetes, Docker

ML & Data: Machine Learning, Python ML

Web & DB: HTML, CSS, JavaScript, MySQL, PHP

Tools: Git, GitHub, CI/CD, VS Code, Linux

Core Concepts: DSA, OOPS, OS, DBMS

Education

Integrated MTech in Software Engineering

Vellore Institute of Technology, Vellore | 2022 - 2027

Sept 2022-Present

CGPA:8.26

Certificates

AWS Academy Graduate – Cloud Foundations

AWS (Advanced cloud architecture knowledge including AWS services, distributed systems, and infrastructure as code)

Data Structures and Algorithms in Java (Intermediate Level)

Great Learning (Advanced DSA proficiency)

Reinforcement Learning with Python

Value Added Course (VAC), VIT

Data Visualization

Infosys Springboard

Projects

Secure File Storage and Sharing System

- Architected and developed a secure web application utilizing encryption protocols and authentication mechanisms for file storage and controlled access
- Implemented end-to-end security measures including encryption at rest and in transit, access control lists, and role-based authorization
- Demonstrated system reliability and scalability through comprehensive testing and modular design patterns
- Tech Stack: Python, Web Technologies, Database Systems, Security Protocols

Rebooting Democracy: Smart Online Voting System

- Engineered a secure, scalable web-based voting platform with distributed architecture principles for transparent elections
- Implemented cryptographic security (MD5 password encryption), user authentication, voter registration, and role-based admin controls
- Developed automated vote counting and result verification mechanisms ensuring data integrity and system reliability
- Tech Stack: PHP, MySQL, HTML/CSS, Security Protocols, Database Design
